

CARBON & EMISSIONS TRADING

“Our Carbon Constrained Future - A Challenge and an opportunity for Australian Business”

Carbon Trading is coming to Australia. By 2010, Australia will have a Carbon and Emissions Trading Scheme (AETS) in place. This will be a significant change for all Australian Business bringing with it substantial costs, challenges and opportunities.

In conjunction with Energetics, Executive and Corporate Programs, Faculty of Business and Law is pleased to present this timely one day course.

Course Description

This Australian Carbon and Emissions Trading course is designed to provide a sound understanding of what carbon trading will mean to Australian business. It is a practical one day course that covers the world of carbon and emissions trading and the business impacts of the upcoming Australian Carbon and Emissions Trading Scheme. It will provide the knowledge and tools to help your business prepare for the significant changes ahead.

- How will the scheme work and how will it impact your business?
- There are significant extra costs, can you pass them on or will they impact your profits?
- What are the new reporting responsibilities and legislative obligations?
- What are the opportunities presented by early action credits and abatement projects?
- What are the key carbon and emission risks and how can they be managed?
- What business system and IT changes are needed now to prepare for carbon trading?
- What internal abatement opportunities or projects should you pursue today?
- What will the cost of carbon be? What is it now and what will it be in the future?

Who Should Attend

Management from medium to large size companies - energy intensive industries - finance industry professionals - business people interested in understanding this new dynamic business area.

Key Topics

- Overview of carbon and greenhouse markets globally and in Australia
- Objectives & theoretical approaches for carbon trading
- Carbon trading basics – buying, selling, accreditation, acquitting, risk management
- Past experiments in emissions trading, lessons from the current markets
- Commercial perspective – business needs, wants, concerns in relation to carbon trading
- Current and future prices – what are current carbon prices, where will they go in future
