

1. Download the **uq_cochrane_library** filter from the University's EndNote web site, and save it to your computer in C:\Program Files\EndNote X\Filters (you need only do this once).
2. Save your search results as follows:

Click **Export All Results** or select the individual citations you wish to export, then click **Export Selected Citations**.

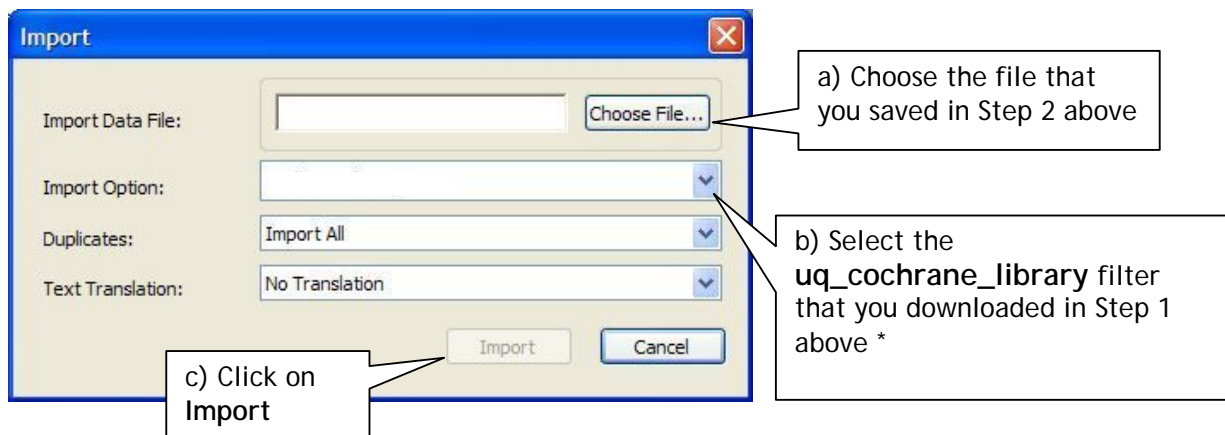

At the following screen, select the required **Export Type** and **File Type**, and click **Go**

Save the file as a text file with a .txt extension

3. Import your search results as follows:

Open your EndNote Library and click on **File | Import**. This opens the **Import** dialogue box on your screen.

* if this filter doesn't appear in the drop-down list of import options, select **Other Filters...** This will open EndNote's Filter Manager, allowing you to select the required filter.

Important!
Check the quality of references you have imported, and edit them as necessary.
