# HUNTER MEDICAL RESEARCH INSTITUTE (HMRI)

**Accelerating Health Outcomes Through Collaborative Research**

**The Hunter Medical Research Institute is a leading health and medical research institute dedicated to improving health outcomes through collaborative research. HMRI is open to working with industry on joint research, funding, and projects that take healthy further for the one million people across the Hunter New England region and beyond.**

## PARTNERSHIP CAPABILITIES

- Joint research projects
- Funding collaborations
- Impact-driven initiatives
- Regionally focused research agenda

## PROVEN IMPACT

- Improving health outcomes for the Hunter New England region
- Collaborative research approach
- Sustainable research model with improved cost recovery

## REVOLUTIONIZING STROKE TREATMENT

HMRI researchers were the first internationally to deploy and evaluate advanced CT imaging in a regional telestroke service. This innovation has significantly improved stroke diagnosis and treatment in rural and remote areas. The team also pioneered the use of tenecteplase, a next-generation thrombolytic agent, which has now become the preferred approved acute stroke thrombolytic therapy worldwide due to its superior efficacy and safety profile.
