

# PARTNER WITH US

UNIVERSITY OF  
NEWCASTLE  
AUSTRALIA

**GLOBAL SPORT  
AND MOVEMENT  
COLLABORATIVE**

Join the Global Sport and Movement  
Collaborative Doctoral Training Centre

The Global Sport and Movement Collaborative's Doctoral Training Centre (DTC) links industry, government and university together via an industry embedded PhD program, designed to solve real world industry problems.

The DTC produces job-ready graduates who are equipped to design industry solutions that harness cutting-edge technology, enhance overall wellbeing, and improve performance.

The DTC is an active national hub for research and education that will elevate the role of sport and physical activity in society.

## **PATHWAYS**

### **PATHWAY 1**

Work with Global Sport and Movement Collaborative members to recruit a new PhD student to help solve key industry challenges.

Students completing their PhD through the DTC will be high-achieving researchers equipped to tackle real world challenges. A function of the Global Sport and Movement Collaborative will be to recruit the appropriate candidate for each project. The successful candidate, and the progress of your project, will be supervised by an experienced researcher within the University to help drive outcomes for your research project.

### **PATHWAY 2**

#### **Upskill a current employee**

The DTC provides the unique opportunity for current, high performing employees to increase technical skills and knowledge. By providing this opportunity for professional development, you are increasing the technical skillset and knowledge base of your organisation, with the added benefit that your PhD candidate will already know your business well. Your employee will continue to work for you and be based at your workplace, while completing their PhD program part-time.

## **BENEFITS**

The DTC offers a targeted, national PhD program focused on identified priorities for industry, government, and communities.

The DTC will deliver impactful research in areas of unmet need. The collaboration model of the DTC benefits all parties by:

- Improving employability for job ready candidates
- Providing access to expertise and resources to solve key challenges
- Enhance skill development
- Deliver capacity building opportunities
- Offering a competitive stipend to students wishing to participate full-time or part-time.
