CONCERNED ABOUT HIGH BLOOD CHOLESTEROL LEVELS?

Are you aged 18 – 70 years and would like to contribute to the advances in nutrition and cardiovascular research?

If yes, then researchers at the Nutraceuticals Research Group would like to invite you to become a participant in our research study.

Our research aims to reduce blood cholesterol levels and other risk factors for heart disease, just by using a single food and a supplement.

If you are interested or would like more information about this study please contact Jessica Ferguson by phone: (02) 4921 5636 or email: jessica.ferguson@uon.edu.au

This project has been approved by the University’s Human Research Ethics Committee, Approval No. H-2015-0162
