OVERVIEW

Cities and regions everywhere are undergoing complex transformation.

Global processes of social, cultural, economic, political and environmental change are generating new patterns in how people live and work; how they are governed: how their economies are managed; how they connect to global and local communities and how they connect to their environments. These transformations produce critical challenges for communities, economies and environments and for their governance.

From geographical and interdisciplinary perspectives, CURS' research focuses on the factors driving urban and regional transformations, their outcomes, the challenges they present and the prospects of creating just and sustainable urban, rural and regional communities, economies and environments.

Through basic, applied and community-engaged research, CURS contributes theoretically informed and empirically grounded knowledge and policy-relevant insights on the processes, dynamics and challenges of urban and regional change.

Our work connects to contemporary issues in public policy and practice through strong collaborative relationships with state government departments, local government agencies, and private, not-for-profit and community organisations.

EXPERTISE

CURS has strong local and international networks and wide expertise across areas including:

- Urban and Regional Social Development
- Asset-based Community and Economic Development
- Housing and Neighbourhood Studies
- Critical Development Studies
- Community Adaptation to Climate Change
- Cultural Politics of the Environment
- Resource Management Conflicts
- University Engagement with Regions and Communities

Our researchers have methodological expertise in qualitative research methodologies—including in-depth interviewing, focus groups and participatory action research—as well as expertise in questionnaire surveys.

RECENT SUCCESSSES

TOPIC	PROJECT	PARTNER/FUNDER
Building a More Sustainable City: Official and Everyday Practices of Regeneration	Explores urban regeneration at a city-wide scale, investigating how the urban fabric is changed by both official large-scale regeneration projects and the everyday practices of households.	ARC Discovery Project with Macquarie University
Local Attitudes to Changing Land Use – Narrabri Shire	Investigates the attitudes and effects of local land-use changes. This is to be the first of several national studies exploring changing land-use patterns in rural and regional communities.	NSW Dept of Primary Industries, with CSRER, UoN
Drought Impact and Climate Change Adaptation	This NCCARF-funded project examines how drought impacts effect farming communities in regional Victoria. It considers the barriers to adaptation and offers insights into how government policy might be reframed to think of drought areas in terms other than 'crisis -ridden'.	National Climate Change Adaptation Research Facility, Sinclair Knight Merz
Urban Energy Transitions	Investigates the pathways, practices, and political dynamics of energy transitions in Australia's two largest cities. Through a focus on CBDs and suburban office parks it identifies opportunities for and barriers to transition and sheds new light on the limits and potentials of urban energy transitions.	ARC Discovery Project with Macquarie University
Closing other gaps: Yolŋu Perspectives on and Proposals for Two-Ways Learning to Improve Intercultural Communication and Policy	Working with Indigenous authorities in Northeast Arnhem Land, the project will draw on their effective approaches to cultural tourism to improve inter-cultural communication capacity in key sectors of Australian society.	ARC Discovery Project with Macquarie University
Urban Carbon Governance	Effective responses to climate change hinge on governing carbon, especially in our cities. This project will provide, for the first time, a baseline map and analysis of the actors, roles, relationships, and networks that govern carbon in Australia's cities.	ARC Discovery Project with Macquarie University, Durham University, UK
Strengths-Based Ways of Working with Aboriginal and Torres Strait Islander Communities	Focuses on the ways that community development practitioners employ strengths-based practices in their work with Aboriginal and Torres Strait Islander communities to build resilience for better development outcomes.	Centre for Appropriate Technology

FACULTY OF SCIENCE AND INFORMATION TECHNOLOGY CAPABILITY STATEMENT

CENTRE FOR URBAN & REGIONAL STUDIES (CURS)

WORKING WITH US

CURS has the research expertise and experience to support and enable projects with Australian and international organisations—including government agencies, community-based organisations, not-for-profit organisations and businesses—to build understanding of the processes, dynamics and challenges of urban and regional change and to identify the responses needed to create just and sustainable communities, economies and environments.

Research Services

We can provide the research and insight into guide organisations' responses to the challenges of urban and regional transformation and to inform effective and practical policy outcomes. Our approach is collaborative, interdisciplinary, and innovative. Our methods are effective. Our research is creative and high quality. We are experienced in communicating complex issues in an accessible and

engaging way. Our researchers are often invited to speak at conferences, forums, workshops and seminars. We are also frequently called upon by print, radio and television journalists for expert opinion.

Partnerships

We have had many successful partnerships with state agencies and local governments, community-based organisations and businesses.

Publications:

We are committed to sharing the results of our work. Details of our reports, journal articles and conference papers and other work can be found at our website: www.newcastle.edu.au/research-centre/urban-and-regional-studies/
